9.-11.

APRIL 2025, VIENNA

INTERNATIONAL
MUSEUM CONFERENCE
ON CLIMATE CHANGE

At the end of the research project „Modelling museum pests, fungi and indoor climate”, based in the Natural History Museum Vienna, we organize an international conference in climate change and its effects on museums. The talks will cover different aspects like such as the effects or outdoor climate on the indoor climate, on insects, fungi, but also energy consumption.

We want to bring together conservators, experts for climate change and climate modelling, planers of sustainable museum buildings, building facilities, microbiologist, entomologists and material scientists, that will present their newest results and discuss with you, how we can adapt our museum buildings, the indoor climate and find sustainable solutions. Presentation of good practice examples will be an important contribution.

Climate change is one of big challenge of the 21th century and our collections are at risk of increasing temperature and extreme weather events. Come to the beautiful city of Vienna to listen to exiting talks and discuss with us the future of museums!
